Auto Bender

CLN of South Florida Inc., has produced a CNC Auto Bender that will take your prenotched material or flat material and automatically bend the material to the desired shape.

The new patent pending roller designs allow the radius to be bent in one roll forming operation that will increase the productivity of your channel letter fabrication department.

Patent Pending

CLN has allowed you to use any notching machine you have and upgrade your metal fabrication department to automatically handle the production load or lack of skilled personnel in your shop.
